

Colleague User Interface 4.0 Demonstrations

Come see and learn how User Interface 4.0 (UI 4.0) transforms the Colleague (Datatel) User Experience. With UI 4.0's powerful interface, you have new ways to work and streamline your processes. The new interface incorporates Microsoft Silverlight technology, and brings a new level of functionality to Colleague – context. By having a person in context, you can easily move from one form to another to complete tasks.

A few of the enhancements provided by this UI release are the ability to:

- see staff and student pictures from within Colleague's new person context card
- work with several people across forms easily
- save forms, as well as people, as "Favorites"
- forget all those mnemonics and just remember what the form does – search on a keyword or description of what the form does
- search on multiple fields, across Colleague applications
- use Yahoo's mapping tools to see geographic trends
